

Cross Institutional Bioimaging PhD Course 2021

Danmarks
Tekniske
Universitet

KØBENHAVNS
UNIVERSITET

The Cross Institutional Bioimaging Ph.D. course will be given by a series of lecturers who are experts within each their field of bioimaging. The course will take place at different institutions in order to expose the students to different research groups, researchers and experimental research facilities. The course will thus give the students a unique opportunity of orienting themselves within an active and diverse field of interdisciplinary science within bioimaging.

The course is relevant for PhD students within medicine, physics, chemistry, biochemistry, molecular biology, nano-bioscience, pharmaceutical sciences, agricultural science or biology. The emphasis of the course is a tour of all bioimaging techniques available in Denmark and will cover subjects like live cell imaging, spinning disk microscopy, electron microscopy, photoactivated localization microscopy, single particle techniques, structured illumination, stimulated emission depletion microscopy, imaging of neurons and cell migration. The course corresponds to 10 ECTS points.

Date	Time	Title	Location
Monday Sep. 13	9:30-17:30	Fluorescence Microscopy, Two Photon and Image Analysis	SDU
Monday Sep. 20	9:30-17:30	Confocal Microscopy	KU
Monday Sep. 27	9:30-17:30	Live Imaging in Yeast, Plants and Mammalian Cells	KU
Monday Sep. 4	9:30-17:30	Single Particle & Fluorescent Proteins	AU
Monday Oct. 11	9:30-17:30	Image Analysis, Introduction to Python	KU
Monday Oct. 25	9:30-17:30	Super-Resolution, STED, ICS and Raman	SDU
Monday Nov. 1	9:30-17:30	Image Analysis, Pixel and Object Classification	DTU
Monday Nov. 8	9:30-17:30	Non-Invasive Imaging Modalities (PET-SPECT-CT-R)	SDU/OUH
Monday Nov. 15	9:30-17:30	Electron Microscopy	KU
Monday Nov. 22	9:30-17:30	Preparation for the Exam	Home :)
Monday Nov. 29	9:30-17:30	Evaluation and Student Talks	KU/SDU
